

## Breastfeeding Committee for Saskatchewan

[www.thebcs.ca](http://www.thebcs.ca)

### **Important:**

- Feed baby often, at least every 2 hours.
- Apply warm cloths and massage the area before and during breastfeeding.
- Talk to your health care provider about using an anti-inflammatory.

### **For further information contact:**

## **PLUGGED DUCT**

### **What is a plugged duct?**

- The breast contains many milk ducts that make milk. When one of these ducts is not being drained properly it may become plugged.

### **Possible signs and symptoms:**

- A hard, often painful lump in your breast.
- A lump that does not go away after breastfeeding.
- Comes on gradually.
- There is little or no warmth in the area.
- Your temperature maybe slightly elevated (38 C).
- You feel generally well.

### **What you can do:**

- Rest.
- Before feeding baby:
  - Apply a warm moist cloth to the lump in your breast.
  - Gently massage the area that is sore.
- Breastfeed often, at least every 2 hours on the sore breast. Massage the lump while breastfeeding.
- Make sure baby is well latched and is sucking well at the breast.
- If your breasts do not feel soft after breastfeeding, hand express or pump.
- Avoid tight or binding clothing; even a baby carrier worn for a long period of time which causes pressure on the breast. Wear a well-fitting bra (one that does not have underwire).
- Take 2 tbsp. of lecithin daily or 1200 mg capsule 3-4 times a day.
